About: The principals are expected to act as a leader in their institutes. The success of an institutes to accomplish the goals depends upon the ability of the head to lead staff members. Leadership is one of the four functions that constitute the administrative process. Planning sets the direction and objectives; organizing brings the resources together to turn plans into action; leadership builds the commitments and enthusiasm needed for people to apply their talents fully to help accomplish plans; and controlling makes sure things turn out right. The emphasis on principal as leader have added a new dimension to the dual roles of principal as educator and principal as administrator. One of the recent approaches to educational leadership is the transformation leadership, which is part of the “New leadership” paradigm. It is a process that changes and transforms individuals. It is concerned with values, ethical standards, and long-term goals. It involves assessing followers’ motives, satisfying their needs and treating them as full human beings. It is a process that subsumes charismatic and visionary leadership.
